Knowing room temperature, adjusting your thermostat, is the first step toward saving energy dollars.

A healthy environment is one in which the surroundings contribute to productivity, comfort, and a sense of health and well being.

Good indoor air quality (IAQ) enhances occupant health, comfort, and workplace productivity. Uniformity of temperature is important to comfort.

For each degree you lower your thermostat setting during winter months, energy costs can be reduced by 3-5%. Every degree above 78 degrees for air conditioning, will save 6-8% off your energy costs.

Plate Pals™ allow you to monitor room temperature, then adjust your thermostat more effectively.
